

PROJECT AEGIS -- PROPULSION BLUEPRINTS

Dr. Elena Rostova | Clearance Level: TOP SECRET

1. EXECUTIVE OVERVIEW

Project Aegis specifies the proprietary propulsion geometry for next-generation unmanned sub-orbital atmospheric gliders. Proprietary patents involve pulse detonation chambers and active magnetic nozzle stabilization.

2. TECHNICAL SPECIFICATIONS (CONFIDENTIAL):

- Thrust Vectoring : Dual Gimbal Magnetic Deflection (+/- 14.5 degrees)
- Chamber Pressure : 28.4 MPa @ 2,850 Kelvin continuous duty
- Firmware Target : Cortex-M7 Radiation-Hardened DSP (Revision 4.1.2)
- Telemetry Beacon : 14.2 GHz Ku-band Encrypted Telemetry

3. EXFILTRATION FORENSIC ASSESSMENT:

Forensic inspection of unallocated flash sectors reveals an unauthorized GPG-compressed tarball 'aegis_schematics_v3.tar.gz.gpg' staged in /tmp and pushed to an external FTP server (ftp.dropzone-7.net). Investigator Sarah Vance identified insider user 'erostova' as the active identity during the exfiltration window.
